

VERIFIED EXECUTABLE LINEAR ALGEBRA

# DenseMatrix makes Lean matrix algorithms run like data.

Row-major data for RREF, LU, and determinant kernels, bridged back to proof-friendly Matrix theorems.

## Why DenseMatrix

Row-major arrays let kernels work over contiguous data instead of re-evaluating pointwise Matrix functions.

## Multiplication Scaling

DenseMatrix vs Matrix → Dense, median ms on a log scale.

## Proof Connection

- DenseMatrix.toMatrix\_add
- DenseMatrix.toMatrix\_mul
- rowEchelonForm\_toMatrix
- luDet\_eq\_det
- gaussDet\_eq\_det

Theorems connect executable kernels back to the Matrix API.

## Representation Tradeoff

Pointwise primitives at the largest complete size.

| OPERATION | DENSE | MATRIX | MATRIX → DENSE | WINNER |
|-----------|-------|--------|----------------|--------|
| Add       | 54.0  | 45.1   | 47.5           | Matrix |
| Scalar    | 53.2  | 30.3   | 35.3           | Matrix |
| Transpose | 55.3  | 43.5   | 46.8           | Matrix |

## Benchmark Scope

|                                           |                              |                  |
|-------------------------------------------|------------------------------|------------------|
| 2247<br>RECORDS                           | 328<br>MATERIALIZED<br>CASES | 2048<br>MAX ROWS |
